

Brake Flush and Fill

Forklift brake systems wear over time. Flushing and filling the brake fluid will slow the wear. It will remove any contamination or impurities and it will make the brake system run smoothly, preventing damage.

We will flush and fill the brake system with new fluid. This prevents the brake system from getting corroded and clogged with contaminated fluid.

- ◆ Flush out the old brake fluid removing impurities
- ◆ Refill with fresh brake fluid
- ◆ Bleed brake system of air
- ◆ With customer approval, inspect and repair additional items as needed
