

# Brake System

Forklift brake systems can wear over time. Getting the brake system checked is a must. This will help lessen the strain on the brake system and minimize brake issues.

We will look to see if there are any problems or any drivability concerns within the brake system and give it a thorough cleaning.

- ◆ Test brake actuation and effectiveness.
- ◆ Inspect any red flags that the test drive conveyed.
- ◆ Remove drive wheels and clean and adjust brake system.
- ◆ Inspect and repair additional items as needed, per customer approval.
